

ECLIPSE™

Automatic Safety Cover

BY COVERSTAR

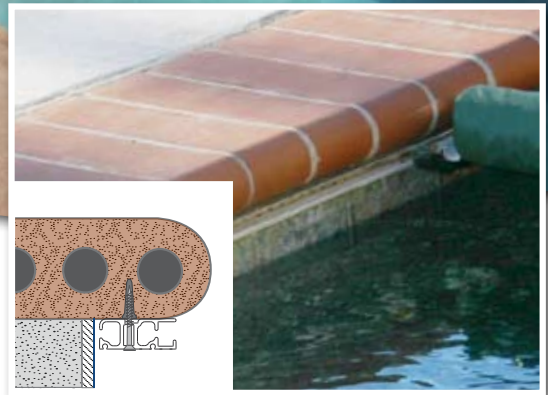

UNDERGUIDE

The ECLIPSE™ Underguide safety cover system provides an attractive and effective solution for rectangular pools. The entire motorized cover is installed below the deck and

glides through aluminum guides that are mounted to the bottom side of the pool's coping (*Underguide, a standard feature*). This allows the guides to remain virtually unnoticed. For an even more integrated look, guides can be built directly into the pool wall (*Encapsulated Underguide, an optional feature*).
